

Get the dump.ppp file

To debug a GPRS connection or to verify which packets are coming in and out on the GPRS connection, you can configure the eWON to record a dump.ppp file. This dump.ppp file can then be analyzed by a network protocol analyzer like Wireshark.

To activate the PPP dump log, configure the eWON as following:

Put the eWON "on Internet" ... by enabling the "Maintain connection" for example.

Then by FTP, connect to the eWON and get the file called dump.ppp.

If you use a recent eBuddy version, then the dump.ppp file will also be included in the backup when the 'include support files' option has been checked.
