

## Plug'n Route feature

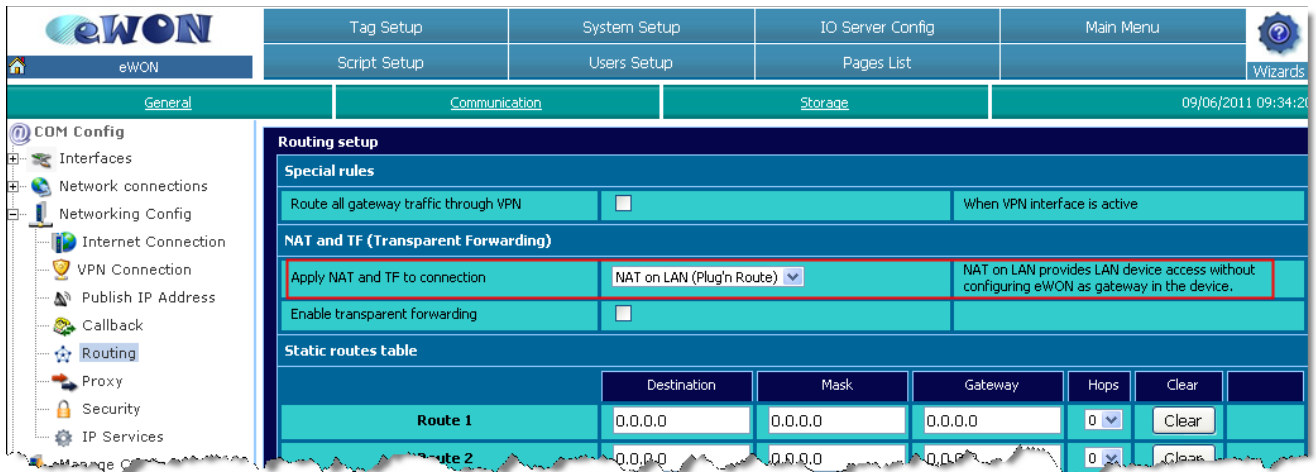

Plug'n Route is a new routing feature inside the eWON running firmware 6.2s0 or higher.

It highly simplifies the configuration steps to access Ethernet devices through Talk2M. When Plug'n Route is activated, then there is no need anymore to reprogram the Ethernet device to define the eWON LAN as default gateway.

With Plug'n Route, once the VPN tunnel to the eWON through Talk2M established, you can use the local IP address of the Ethernet device to connect to it. As if you were connected locally.

The Plug'n Route feature is activated by default by the Talk2M wizard.

The Plug'n Route feature can be enabled/disabled using menu System Setup/ Configuration/ Networking Config/ Routing:

### - Note -

*Concerning FTP access using Plug'n Route: If you need to realize an FTP access to the Ethernet device behind the eWON, then you need to use FTP in passive mode.*

*If the Ethernet device or your software only accepts FTP in active mode, then to make the connection through Talk2M work, you will need to deactivate the Plug'n Route feature on the eWON and to define inside the Ethernet device the eWON LAN as default gateway.*

## Revision

### Revision History

| Revision Level | Date       | Description          |
