

Tap Win32-V9 adapter name

When the following message appears:

```
Cannot connect to Talk2MServer :> FATAL:Error: When using --ip-win32  
netsh, if you have more than one TAP-Win32 adapter, you must also  
--dev-node
```

The problem is due to the fact that the description of interface TAP-Win32 V9 has been renamed before Talk2M connection.

The name "Talk2m-eCatcher Connection" must not be changed.

Check in the list of network adapters if you have an adapter named "Talk2m-eCatcher Connection"

If the name of this Interface is not the same, you must rename this one

How to rename easily ?

You can run `renametap.vbs` in `C:\Program Files\eCatcher-Talk2M\Talk2mVpnService\drivers`
